

WHAT IS CLAIMED IS:

1. A display apparatus comprising an interlayer insulation film provided on a substrate in the condition of covering recesses and projections of said substrate, and a display device provided on said interlayer insulation film, wherein

said interlayer insulation film comprises a flattening insulation layer made from an organic compound-containing material and formed in the condition of embedding said recesses and projections, and a coat layer consisting of an inorganic material and formed in the condition of covering the surface of said flattening insulation layer.

2. A display apparatus as set forth in claim 1, wherein

said display device is an organic electroluminescence device.

3. A display apparatus as set forth in claim 1, wherein

said flattening insulation layer is made from a coat film.

4. A display apparatus as set forth in claim 1, wherein

said flattening insulation layer is made from spin on glass or a resin material.

5. A display apparatus as set forth in claim 1,
wherein

said interlayer insulation film is provided with a contact hole reaching to a lower layer of said interlayer insulation film, and

said coat layer is provided in the condition of covering the side circumferential wall of said contact hole.
